

The Story of **AUTISM**

PART 28:
ADDRESS
THE SOURCE
NOT THE
SYMPTOMS

THE STORY OF AUTISM: Address The Source

Autism is not a speech and/or behavior disorder.

Autism is a sensory motor disorder, caused by primitive reflex retention.

THE STORY OF AUTISM: Address The Source

The solution to fixing the problem is not to start at the top, but rather to start at the source.

Start at the primitive reflexes.

Tonic neck reflex

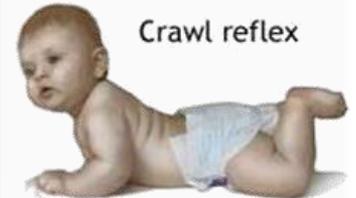

Grasp reflex

Step reflex

Crawl reflex

THE STORY OF AUTISM: Address The Source

The very first thing to do is make sure that they are all integrated. It doesn't matter if a person is 2 years old, 22 years old, or 42 years old. This can still be done. And you will see improvement right away.

THE STORY OF AUTISM: Address The Source

One thing you need to understand is that you cannot just target one reflex and think that will do the trick.

As you saw in presentation 2, almost all the primitive reflexes are inter-connected. So if you just pick one, because it seems like that reflex is the biggest problem with your child or client...

THE STORY OF AUTISM: Address The Source

...that reflex might not remain integrated. Because one of the reflexes that needed to be integrated before it remains active, and you don't know how far back this retained reflex chain could go.

THE STORY OF AUTISM: Address The Source

My daughter, Meaghan, had a lot of overlapping hand eye, vestibular and proprioceptive problems, so in her case there was no question about running through the whole gamut of primitive reflexes right from the start.

THE STORY OF AUTISM: Address The Source

I use a low level (cold) laser reflex treatment protocol with Meaghan.

I didn't really know what I was doing the first time I tried it, but 3 hours later when Meg sat down to type she was a completely different person.

THE STORY OF AUTISM: Address The Source

She was very happy, excited and could hardly wait to communicate:

“You eat yogurt for lunch every Saturday.” She typed. “Don’t you get tired of it?”

(I’d **assumed** she never paid any attention to anything I did that didn’t directly affect her.)

THE STORY OF AUTISM: Address The Source

When I asked her about how she liked the treatment, she responded:

*“I can see much better.
A light has been turned
on in my brain.”*

THE STORY OF AUTISM: Address The Source

After the second laser reflex integration treatment, Meaghan typed:

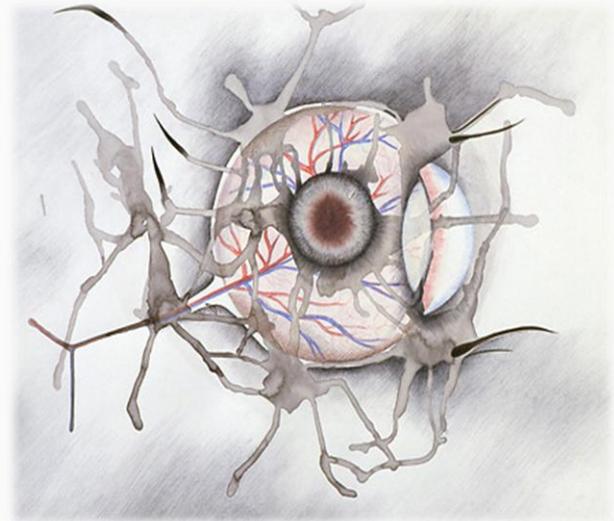

*“The treatments make everything easier.
And I can see even better.”*

THE STORY OF AUTISM: Address The Source

The impact on her vision was not something I had expected at all.

Now, of course, I understand why her vision would improve so much. Funny, after years of trying every form of vision therapy and visual aid possible, turns out what she needed had nothing to do with her eyes.

THE STORY OF AUTISM: Address The Source

“I have even better eyesight and everything is not freaking me out. Yes, my goofy geeky personality is really starting to retreat.”

Meg wrote this after her 3rd treatment.

You can read more of what she has to say in the presentation *“Meaghan’s Voice.”*

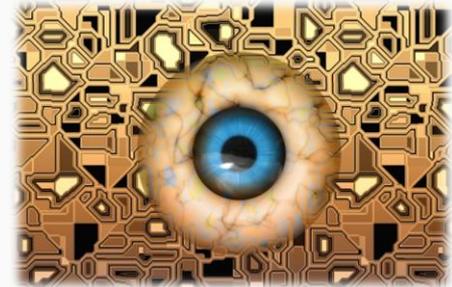

THE STORY OF AUTISM: Address The Source

I continue to do the primitive reflex treatments with Meaghan, alternating with a brain balance protocol, twice a month and she continues to improve.

The name of the program I use is *Quantum Reflex Integration*. It was created by Bonnie Brandes and you can find information on it here:

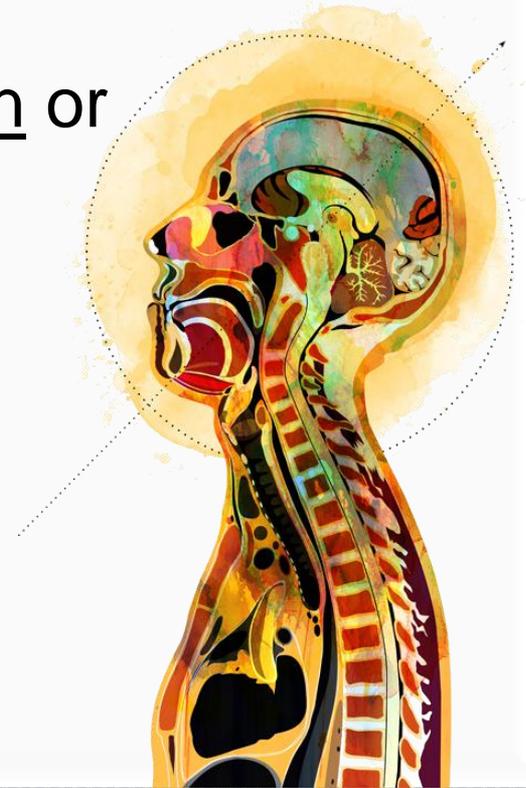

<http://www.reflexintegration.net/>

THE STORY OF AUTISM: Address The Source

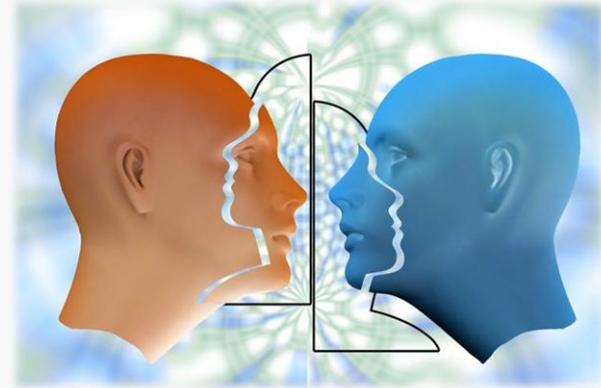

You can do manual reflex integration therapy as well. The best guide for this is Masgutova Neurosensorimotor Reflex Integration or MNRI, by Svetlana Masgutova, PhD.

You can visit her website here:
<https://masgutovamethod.com/>

THE STORY OF AUTISM: Address The Source

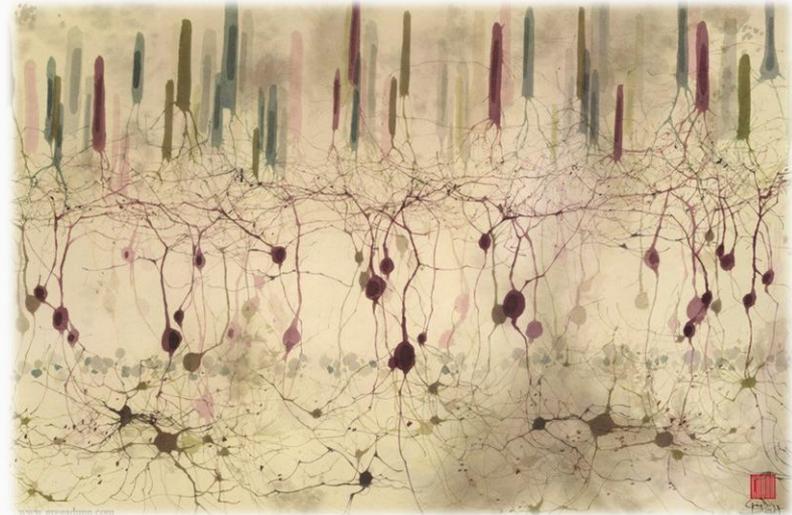

Of course, reflex integration is just the start. The next step, now that you understand how the autistic brain works, is to create a stimulating education program that will allow them **to express both sides of their brain without the struggle of having to deal with intricate motor challenges.**

THE STORY OF AUTISM: Address The Source

The solution to helping those with autism live better lives is not to address the symptoms, but to address the **core problem**, which is primitive reflex retention.

Do this first. You will be amazed at what a difference this makes.

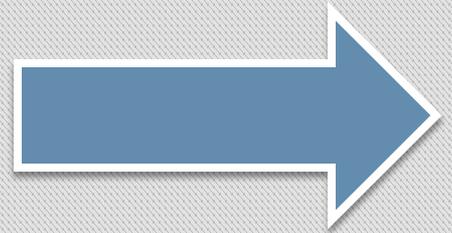

THE STORY OF AUTISM: Address The Source

I know it almost seems too easy, but try it and you will see.

In order to solve any problem you first have to find the root cause and address it. It is no different for autism.
